

Quels ont été les points forts de votre expérience d'apprentissage dans cet enseignement ? / What were the strongest aspects of your learning experience in this course?

- 1

Diego is an excellent TA, very knowledgeable and keen to explain elements of the course in detail.
--
- 2

A great understanding of theoretical tools supplemented with practical experience - computer programming with theory really helped us translate ideas into actual modelling.
--
- 3

Nothing special

- 4

...

- 5

I found the class very well-structured, very well taught, and I highly appreciated your dedication to the class.
--
- 6

L'investissement du TA dans la matière, la qualité des explications

- 7

The TA sessions were complementary with the classes. Diego taught us how to apply the concepts seen in class in practical ways in a clear manner.

- 8

Complete correction of problem sets and willingness to explain courses' concepts
--
- 9

Diego explained everything very clearly, even if the concepts were hard.
--
- 10

The workload is appropriate.

- 11

Good effort of pedagogy, with an extensive course material and a fast communication through GitHub.

- 12

Great! Lectures are clear and really well prepared and presented, and problem sets are helpful practice.
--
- 13

I would have appreciated having feedback\corresponding grades on the problem sets given that they are extremely time consuming
--
- 14

Diego is absolutely great at walking students through the logic of complex problems, a great instructor. Hope his handwriting could get better though

- 15

Dynamic programming

- 16

The class was awesome. Diego is now a super clear and entertaining teacher. The use of GitHub was a really good idea and supplementary materials were very useful.
--
- 17

Rigorous theoretical and quantitative training
--
- 18

\

- 19

Great course great teaching

Quels ont été les points forts de votre expérience d'apprentissage dans cet enseignement ? / What were the strongest aspects of your learning experience in this course?

- 20 Working in groups make the workload more bearable
- 21 Clear explanation of the algorithms to solve the models.
Thanks!
- 22 Le cours était complet et globalement satisfaisant.
- 23 The problem sets were useful to understand the course and prepare for the final exam.
We can also work on the implementation and improvement of coding skills.

Comment pourrait-on enrichir l'expérience d'apprentissage dans cet enseignement ? / How could the learning experience improve in this course?

- 1 I would recommend giving back grades for the problem sets as that can greatly help students.
- 2 Timely evaluation of assignments and not at the end of the semester would be really helpful.
Also, Diego should work on presenting his lectures within the 2-hour timeslot. He has a knack for overshooting :)
- 3 It would be great if we can learn Julia/Python properly. Also, I was suffering from his handwriting. However, overall, he was a nice teacher and tried hard to explain everything.
Except for the handwriting, I enjoyed his course.
- 4 ...
- 5 I think it would be nice to keep a precise awareness of the time so that the course does go so much above the limit.
Also, I think it could be very nice to have seminar notes, so that we can only focus attention on understanding in class, and not a copying the maths on the white board (because the slides do not detail the maths).
- 6 Feedback plus rapide sur les DM
- 7 Having some feedbacks on the numerous assignments we had would have been beneficial.
We did the exam without having had any feedbacks on our work.
- 8 I think that what is done is already enough.
- 9 I would have appreciated to get the correction of the problem sets back during the semester to understand my mistakes.
- 10 The coding part can be improved.
- 11 It would be nice to have feedbacks on the Problem Sets.
- 12 Not many suggestions. Maybe explicitly let us know that we're covering ch.s 17-18 in Sargent/which chapter's we're covering when, I found these too late. Also, if you could give some grades/feedback on problem sets earlier (so we know if our submissions are meeting expectations), that would be helpful. But I know that's difficult.
- 13 I would have appreciated having feedback\corresponding grades on the problem sets given that they are extremely time consuming
- 14 It was a great experience
- 15 everything good
- 16 Maybe PS solutions could be given earlier so that we have time to review it before the final.
